

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claim 2 without prejudice or disclaimer and AMEND claims 1 and 28 in accordance with the following:

1. **(currently amended)** A database updating apparatus comprising:
a computer network;
a server which provides database-related information through the computer network; and
a user computer which accesses the server through the computer network and retrieves the database-related information, wherein:
the user computer comprises an optical disc recording/reproducing apparatus which records data in or reproduces data from an optical disc, in which a database and a date and time of a last update of the database are recorded, and which is programmed to transmit the date and time of the last update to the server and to record modified/updated data, which is transmitted from the server, on the optical disc; and
the server is programmed to determine if modification/update of the database recorded on the optical disc is needed based on the transmitted date and time, and to transmit the modified/updated data to the optical disc recording/reproducing apparatus, wherein:
first data of the data base is recorded in a read only region of the optical disc prior to a first access of the server by the user computer and the modified/updated data transmitted by the server is recorded in a recordable region of the optical disc.

2. **(cancelled)**

3. **(original)** The apparatus of claim 1, wherein the server transmits a purchase order, which is received from the user computer, to the user computer and the optical disc recording/reproducing apparatus records the purchase order on the optical disc.

4. **(previously presented)** A method of updating a database comprising:

permitting a user computer usable with an optical disc, on which a vendor database is recorded in a read only region of the optical disc, to access a server of the database vendor through a computer network;

receiving a date and time of a last update of the database recorded in a recordable region of the optical disc from the user computer and determining whether modification/update of the database is needed based on the received date and time;

transmitting modified/updated data to the user computer if modification/update is needed;
and

recording the modified/updated data in the recordable region of the disc.

5. **(cancelled)**

6. **(previously presented)** The method of claim 4, further comprising:

recording a new date and time of last update of the disc in the recordable region.

7. **(original)** The method of claim 4, further comprising:

transmitting a purchase order of the user from the user computer to the vendor server;

transmitting information related to the purchase order from the vendor server to the user computer; and

recording the purchase order information on the recordable disc.

8-27 **(cancelled)**

28. **(currently amended)** A method of distributing ~~an~~ and maintaining a database, the method comprising:

distributing an optical disc having a read-only region in which a data base corresponding to a first date and time is recorded and a recordable region in which the first date and time is recorded;

operating the optical disc in a user computer having an optical disc reproducing/recording apparatus;

maintaining update data for the data base corresponding to a second date and time on a server;

accessing the server and transmitting the first date and time to the server;
comparing the first date and time with the second date and time;
transmitting the update data and the second date and time to the user computer if the
second date and time is later than the first date and time;
storing the update data in the recordable region of the optical disc; and
updating the first date and time stored in the recordable region to the second date and
time.
